PROFILE

Full stack developer specializing in Healthcare SaaS applications. Writes scalable software that prioritizes business value and user experience. System Administration and Project Management experience included. Knowledgeable in HIPAA best practices, interoperability and industry standards.

EMPLOYMENT HISTORY

Operations Manager, Lazarus Medical Solutions
Oakland, NJ

Apr 2019 — Present

- Streamlined client onboarding processes significantly decreasing setup time
- Implemented technical solutions for custom business cases tailored to each client for data capture, processing, and aggregation
- Managed vendor relationships and lead development and support for administrative and technical projects
- Performed client onboarding, accounts management, reporting, and support
- Wrote technical documentation and reference guides for end users

Programmer, Lazarus Medical Solutions
Oakland, NJ

Jan 2017 — Apr 2019

- Developed and supported SaaS products: EHR, PM and Medical Notes written with Javascript/jQuery, PHP, MySQL self-hosted on Ubuntu Linux 18.04
- Programmed ASC X12 and HL7 interfaces for clinical and claims handling systems to save clients thousands of hours in manual data entry
- Wrote workflow scripts and data-integrity algorithms to increase employee efficiency and accuracy of claims information using Python and JS
- Wireframed UI/UX and designed assets using Figma
- Created API to integrate third-party applications into proprietary software

System Administrator, Comtron Corporation
Great Neck, NY

Jan 2014 — Dec 2016

- Implemented and managed HL7 Interfaces between EHR and LIS
- Developed BASH scripts to automate laboratory equipment installation
- Security and Network management following HIPAA best practices
- Provisioned servers and on-site installation hosting proprietary LIS on Linux
- Provided remote and on-site IT Support for medical practices and laboratories
